

# GenAI Conversation Starters

**When ChatGPT was released late last year, it brought with it a new set of issues for kids and parents to consider: how generative AI tools will change the digital landscape, and what their impact will be on many aspects of daily life, both on and offline.**

Conversations around the use of genAI are changing as rapidly as the technology - which is why now is the time to start talking about it with kids, as it expands into their academic, social, and creative lives.

**Take some time to choose the most relevant questions from the list below and check in with your kids and teens.**

1. Have you heard your friends or teachers talk about genAI? What do they say about it?
2. Have you ever used genAI? If so, have you tried using it for homework (maybe with a tool like ChatGPT)?
3. What about on social media? Have you talked to chatbots before?
4. Have you used genAI for something creative, like making pictures or presentations?
5. How do you think genAI can help with school assignments or projects?
6. How do you think genAI might cause problems at school?
7. Do you understand where the answers come from if you ask genAI questions?
8. How can you tell if the answers are true?
9. How do you think these tools work? Are there certain things we should or shouldn't use them for?
10. What are you most excited about, or most concerned about, when you hear about what genAI can do?

**Don't know the answers?  
Research them together!**
